

# XRAY

# XRAY

## X-Ray by Sonor – See your sound.

Now both drumming technique and sound creation enter a new level. Inspired by the original Sonor acrylic shell technology first introduced in the 70s, X-Ray offers a combination of outstanding sound presence and state-of-the-art hardware components. Full-bodied tone, powerful projection and excellent variability characterize the sound of X-Ray drums.

The use of select acrylic shell material and the unique manufacturing process ensure an extraordinary drumming experience. Full transparency gives your performance a new quality and lets your audience trace the details of your playing technique.

X-Ray is available within the Sonor Designer Series, which means that you can custom design your individual setup. Choose from a wide variety of sizes, mounts, shell materials and

finishes. As a special feature X-Ray rims and hardware is available with the new Plasma finish, adding extra colour effects to all metal parts.

*“Contemporary drums require ultimate transparency:  
For your playing technique and for your sound.”*  
Thomas Lang
